

Growing Peppers from Seeds of a used Pepper!

You will need...

- the seeds from a pepper
- a plastic fruit container
- some compost
- some cling film

1. Scoop some compost into the plastic container.
2. Gather the seeds from the pepper, sprinkle into the container, cover and then sprinkle with a little water.

3. Cover with cling film, make a few holes and place in a warm sunny place inside... then wait... (keep the compost moist)
4. As the seed start to grow, carefully repot and place outside with sun and water!
